Category:Motorola Category:Radio technologyQ: What's the best way to get a user's comments in their message history? We have a fairly active forum-ish system which are essentially Message Logs. We're looking for the best way to get the latest comments of user's messages. For now, we have a unique table in database to store the message references, the text of the message and the user whose message it was. Database structure: Message Table ----- id Primary Key text Text of the message userId Reference to the user who posted it Then we have a comments table and in this we have the following fields: Comments Table ----- id Primary Key commentId Reference to the message id userId Reference to the user who has written it text Comment made by user (or Admin) Now the problem is that some comments can be made by multiple users and we have to store the comments not only of the one user making it, but also of any admin that changed or approved the comment later. For now, we've been storing the comments by first ID and then setting a column to be either 1 for admin or 2 for user, and have been trying to get
